

**SHALOM
NADHANLIRIVE**

PORTFOLIO REQUIREMENTS & DESIGN SPECIFICATION

Version 0.1 · Planning & Design Foundation · Placeholder Content

Dark Digital Laboratory · Editorial Layout · Selective Glassmorphism · High-quality Motion
Proposed stack: Next.js · React · TypeScript · Tailwind CSS · Anime.js · Lucide · Vercel

01. PURPOSE

Define the design, content, interaction, technical and quality requirements for the portfolio redesign.

This is a living specification. Replace placeholders only after content is confirmed.

02. GOALS

Create a memorable developer identity.

Showcase projects as polished products.

Demonstrate frontend engineering and interaction design.

Deliver a fast, accessible, responsive experience.

Use animation with purpose.

03. AUDIENCE

Recruiters and hiring managers.

Potential clients and collaborators.

Developers and peers.

Visitors arriving from search or social profiles.

04. PAGE ARCHITECTURE

01 / Hero

02 / Selected Work

03 / About

04 / Capabilities

05 / Experience & Education

06 / More Work / GitHub

07 / Contact

08 / Footer

05. VISUAL DIRECTION

Primary concept: **Dark Digital Laboratory**. Near-black foundation, restrained glass surfaces, editorial typography, technical micro-labels and choreographed motion.

Avoid cliché hacker visuals, excessive neon and decorative complexity.

Projects receive the strongest visual emphasis.

06. DESIGN TOKENS

Background: #07090D

Surface: #0D1117

Border: rgba(255,255,255,0.08–0.10)

Primary text: #F4F7FA

Muted text: #8B949E

Accent: #4DA3FF

Use soft blue glow sparingly.

07. TYPOGRAPHY

Display: Space Grotesk or Manrope.

Body: Inter.

Technical metadata: JetBrains Mono.

Use strong size contrast and readable body text.

08. GLASSMORPHISM

Do not make every section a glass card.

Use blur/transparency to create hierarchy.

Keep borders subtle and contrast readable.

Prefer depth through spacing, lighting and composition.

09. HERO

Hero should immediately communicate who Shalom is and what he builds.

Placeholder:

SHALOM NADHANLIRIVE
I BUILD DIGITAL EXPERIENCES.

[SHORT INTRO]

[EXPLORE WORK ■] [GET IN TOUCH]

Optional system panel:

SYSTEM STATUS · AVAILABLE
ROLE · WEB DEVELOPER
FOCUS · WEB APPLICATIONS
BUILD · 2026.09
● ONLINE

10. NAVIGATION

Transparent initially, floating glass on scroll.

Work · About · Contact.

Optional status indicator and active section label.

Simple mobile navigation.

11. SELECTED WORK

Projects are the visual centerpiece.

Replace the equal six-card grid with hierarchy-based showcases.

Use one or two large featured projects and secondary two-column projects.

Add subtle pointer movement, image parallax and directional hover feedback.

Placeholder:

[PROJECT 01]
[PROJECT NAME]
[VALUE PROPOSITION]
[TECH 01] · [TECH 02] · [TECH 03]
[EXPLORE PROJECT ■]

12. ABOUT

Asymmetric editorial layout.

Introduce the person behind the work.

Include a concise journey and CURRENTLY: Building / Exploring / Learning.

13. CAPABILITIES

Present skills as capabilities, not percentage bars.

[FRONTEND] · [BACKEND] · [DATABASE] · [TOOLS] · [DESIGN / UI]

Final technology inventory remains a placeholder.

14. EXPERIENCE & EDUCATION

Vertical timeline with date, organization, role and outcomes.

Scroll-triggered line growth and node activation.

Keep factual and compact.

15. MORE WORK / GITHUB

Transition from selected work to broader code activity.

CTA: [VIEW MORE ON GITHUB ■].

16. CONTACT

Strong closing statement rather than form-first presentation.

LET'S BUILD SOMETHING USEFUL.

Primary CTA: Start a conversation ■

Email · GitHub · LinkedIn · Resume placeholders.

17. MOTION SYSTEM

Anime.js is the preferred motion candidate.

Hero text reveal with controlled stagger.

Scroll-triggered section entrances.

Project image scale/parallax.

Timeline growth and node activation.

Button arrow movement.

Subtle pointer-reactive surfaces.

SVG draw/morph only when meaningful.

Respect prefers-reduced-motion.

Keep most UI interactions around 300–800ms.

18. ICON SYSTEM

Lucide is the preferred icon library candidate.

Use one consistent SVG icon language.

Use icons for navigation, external links, contact actions and meaningful status.

Animate icons subtly when feedback benefits from it.

19. RESPONSIVE

Desktop: full editorial composition.

Tablet: reduce spatial complexity while preserving hierarchy.

Mobile: single-column flow and simplified decoration.

Touch must not depend on hover.

Prevent horizontal overflow.

20. ACCESSIBILITY

Semantic HTML.

Keyboard navigation and visible focus states.

Meaningful labels for icon-only controls.

Readable contrast.

Respect reduced-motion preferences.

Never communicate essential information through animation alone.

21. PERFORMANCE

Optimize and lazy-load media.

Prefer transform/opacity animation.

Avoid unnecessary client-side JavaScript.

Measure performance before launch and after animation work.

22. SEO

Unique title and description.

Semantic headings.

Open Graph metadata.

Descriptive project content and image alt text.

Canonical URL and sitemap/robots configuration as appropriate.

23. FUNCTIONAL

Working navigation.

Working project demo/repository links.

Reliable mobile menu.

Contact success/error feedback.

Functional resume link.

Secure external-link handling where appropriate.

24. TECHNICAL DIRECTION

Framework: Next.js

Language: TypeScript

UI: React + Tailwind CSS

Motion: Anime.js + CSS/native APIs

Icons: Lucide

Forms: React Hook Form + Zod, pending confirmation

Contact delivery: Resend or suitable service, pending confirmation

Deployment: Vercel

This is proposed, not yet locked.

25. COMPONENTS

App shell · Navigation · Hero · Status panel · Section heading · Featured project · Project card · Capability group · Experience timeline · CTA/button · Contact form · Footer · Motion utilities

26. CONTENT PLACEHOLDERS

[SHORT BIO]

[PROJECT NAME]

[PROJECT DESCRIPTION]

[TECHNOLOGIES]

[LIVE DEMO URL]

[REPOSITORY URL]

[EXPERIENCE]

[EDUCATION]

[EMAIL] · [GITHUB] · [LINKEDIN] · [RESUME]

27. ACCEPTANCE CRITERIA

Portfolio must not feel like a generic template.

Dark laboratory identity must be clear in the first viewport.

Projects dominate visual hierarchy.

Glass is selective and purposeful.

Motion improves storytelling.

Mobile remains polished.

Accessibility and performance are first-class requirements.

28. ROADMAP

1. Finalize visual direction and tokens.
2. Confirm content and project inventory.
3. Initialize Next.js architecture.
4. Build navigation, design system and hero.
5. Build selected-work showcase.
6. Build remaining sections.
7. Implement Anime.js motion and interaction polish.
8. Responsive refinement.
9. Accessibility, SEO and performance testing.
10. Production deployment.

29. OPEN DECISIONS

Final fonts.

Exact accent system.

Final project list and priority.

Contact form requirement.

Testimonials/metrics.

Anime.js interaction scope.

Contact service.

Resume destination.

Final social links.

30. NEXT MILESTONE

Create the exact visual blueprint: desktop/mobile layouts, spacing scale, type scale, component states, project-card geometry and the first motion storyboard.

Status: Planning foundation established. Unconfirmed content remains placeholder-driven.
